

Leave

Coding Problems on Linked Lists:

- Comparing Two linked lists
- Merge two sorted linked lists
- Delete duplicates from a sorted linked list
- Detect cycle in a linked list
- Find the merge point of two joined linked lists

cccdigital.io

Compare two linked lists

int CompareLists(Node *headA, Node *headB)

```
{
while(headA!=NULL && headB!=NULL)
{
if(headA->data==headB->data)
{
headA=headA->next;
headB=headB->next;
}
else
return 0;
}
```

Compare two linked lists

int CompareLists(Node *headA, Node* headB)

```
{
while(headA!=NULL && headB!=NULL)
{
if(headA->data==headB->data)
{
headA=headA->next;
headB=headB->next;
}
else
return 0;
}
if(headA==NULL && headB==NULL)
return 1;
else
return 0;
}
```

Detect cycle in linked list

Zoom

Exclusive: SRM KTR

Sample Input

The following linked lists are passed as arguments to your function:

Sample Output

0 1

Explanation

- 1.The first list has no cycle, so we return *false* and the hidden code checker prints **0** to stdout.
- 2.The second list has a cycle, so we return *true* and the hidden code checker prints **1** to stdout.

Detect cycle in linked list

```
bool has_cycle(Node* head)
```

```
{  
    Node* baby = head;  
    Node* big = head;  
    if(head == NULL) return 0;  
    do{  
        if(big->next == NULL || big->next->next == NULL) return 0;  
        big = big->next->next;  
        baby = baby->next;  
    }while(big != baby);  
}
```

```
return 1;
```
